### DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 18-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admission of the prior art on page 1, lines 1-10 of the specification in view of Padden (U.S. 5,500,272) .

Applicant admits that laminates with outer metal layers, inner metal layers and layers of resin impregnated fiber between the metal layers is old. Padden teaches the formation of holes in central metal layers in order to bond resin layers together through the holes and strengthen the laminate at those points for fasteners (abstract). A decrease in the overall thickness occurs at the holes in the inner metal layers (Figure 3, at the areas of element 26). The instant invention claims the used of holes in central metal layers of outer layer metal laminates with inner metal layers and resin fiber layers. It would have been obvious to one of ordinary skill in the art to have put holes in the central metal layers of applicant's admitted prior art laminate in order to strengthen the laminate at the area where fasteners are used because of the teachings of Padden.

Variation in the number of layers and the size of the holes is taken as being within the ordinary skill of the art absent unexpected results.
